

KPU Electric Division Conservation Tip #11
Outdoor Lighting Improvements Can
Save You Money!!!

Outdoor Lighting Tips

- Use outdoor lights with a photocell unit or a motion sensor so they will turn on only at night or when someone is present. A combined photocell and motion sensor will increase your energy savings even more.
- Exterior lighting is one of the best places to use CFLs because of their long life. If you live in a cold climate, be sure to buy a lamp with a cold weather ballast since standard CFLs may not work well below 40°
- Also consider high-intensity discharge (also called HID) or low-pressure sodium lights.
