

KPU Electric Division Conservation Tip #5

Weatherizing Your Home Can Save You Money!

Increase Your Insulation!

Checking your home's insulation is one of the fastest and most cost-efficient ways to use a wholehouse approach to reduce energy waste and make the most of your energy dollars. A good insulating system includes a combination of products and construction techniques that protect a home from outside temperatures, protect it against air leaks, and control moisture. You can increase the comfort of your home while reducing your heating needs by up to 10% by investing in proper insulation and sealing air leaks. A home energy audit or energy usage calculator can help you determine the appropriate insulation levels for your home.
